

# GOOGLE DORKING REPORT

AUTHOR: TOM SHINJO THOMAS

Google dorking—also known as Google hacking—is the disciplined use of advanced search operators to information that normal keyword searches overlook. This document explains what dorking is, catalogs the major dork types, maps out the full palette of Google operators, and provides a step-by-step playbook for crafting your own queries safely and ethically.

## 1. filetype: env "DB\_PASSWORDS"

By using this query on the browser, we can see leaked database's if there is any

• <https://www.almashospital.com/.env>

## 2. intitle: index of /etc/ssh

BY using this query on the browser, we can see the contents related to the linux SSH configuration folder's
